

Laser Lipolysis

The innovative alternative to liposuction

Laser Lipo is an innovative concept in laser assisted Liposculpture, which targets small pockets of fat that are resistant to diet and exercise. It is a minor procedure for body contouring which uses a fine cannula to deliver a safe, powerful laser to disrupt the fat cells causing them to break down. The fat deposits can then be removed using light suction. The Laser Lipo treatment is permanent, safe and virtually painless.

How does it work?

A 2mm cannula containing a laser fibre optic is inserted under the skin. Our doctor slowly guides the laser through the treatment area. The fat cells are melted and broken down and then removed from the body using light suction. Unlike liposuction the majority of healthy cells are left intact as the laser only destroys fat cells.

After liposuction it is common for the skin over the treated area to be loose and saggy. However, laser assisted liposuction is specifically designed to tighten the underlying layers of skin from the inside giving a smoother, firmer result.

Due to the 2mm cannula used the scarring is minimal - similar to that of a blood test and recovery time is significantly reduced. As Laser Lipo is conducted under local anaesthetic, clients are able to leave the clinic within 30 minutes following the procedure. Support bandages are supplied and recommended to be worn for up to 2 weeks.

Is it safe?

Yes, the laser only targets the fat cells and also coagulates the blood vessels to reduce blood loss and bruising normally associated with traditional liposuction.

What areas can be treated?

Areas that can be treated include: tummy, back, jaw line/jowl (double chin), backs of arms (bingo wings), hips, knees, gynecomastia (man breasts) and cellulite.

How long does it take?

Depending on the number of areas the treatment takes between 1 and 3 hours.

When will I see results?

Results are visible within 2 weeks. Further reduction can continue up to six months after treatment.

How much does it cost?

1 Area 1,950 2 Areas 3,450

Before Treatment

Is it surgically invasive?	X	✓
Do I require general anaesthetic?	Local only	Almost always general
What happens to the fat cells?	They are melted and removed	Scraped and vacuumed out
Will there be any blood loss?	Very Minimal	Risk of major blood loss
Is it a same day treatment?	✓	X
How long does the treatment take?	2-4 hours	4-6 hours
Is it a treatment for obesity?	X	X
Can the same area be treated again?	Yes, after 6-12 months	X
What is the size of the instrument used?	2mm fibre optic	3-6mm metal cannula
Can the face be treated?	✓	Only Partially
Can the under chin area be treated?	✓	Only Partially
Can the backs of arms be treated?	✓	X
Can the inner thighs be treated?	✓	X
Can the upper abdomen be treated?	✓	X
How much does it cost?	£2000-£5000	£3000-£12000

After Treatment

How much downtime can I expect?	1-3 day	3-10 days
What level of pain will I have?	Mild-moderate	In most cases severe
How long do I wear compression garments?	2 Weeks	4 Weeks
How much bruising will I have?	Minimal-Moderate	Moderate to major
Will there be swelling of the treatment area?	Minimal-Moderate	Yes, Significantly
When will I see results?	2 Weeks	2-4 months
Does the treatment help my skin tone?	Tightened by the laser	Loose
Is the treatment permanent?	✓	✓
How big is the insertion point scar?	Virtually invisible	Small
